Protecting Your Company's Most Important Asset – Your Data

Alarming, 73% of CIOs describe their organization's current data management practices as outdated or chaotic. What would you do if you lost your company's data and had no means to recover it? Would your company survive? The reality is...without your company's data, your business is extremely vulnerable to loss.

With a variety of options available, choosing the right data backup and recovery method for any company can be difficult. While disk-based backup and tape backup both have their strengths and weaknesses, they are quickly becoming obsolete and are no longer robust enough to meet today's growing data and information management challenges.

Due to its affordability and scalability, cloud data storage is now a viable option for any business environment. Network Business Systems offers a market-leading automatic, off-site, recoverable and economic cloud storage data solution - **Cloud DataSafe™**. The service utilizes world-class, automated data centers to store and backup your data and eliminates the fear, uncertainty and doubt associated with potential data loss. Don't you think it's time for a new strategy?

Get the benefits of modern data protection:

- Avoid costly data loss and downtime
- Unlimited storage capacity space/growth
- Protection from technical and human risks
- Off-site and highly secure data storage
- Multiple encryption methods

Can you afford to let unforeseen circumstances like natural disasters, human error, hackers, or equipment failures threaten your business?
